MEET THE TEAM

Lee Xiong joined ATSC in 2005. Starting out as a Customer Service Representative, Lee quickly showed that he knew how to figure out and solve any technical and customer service issues. With these skills, Lee has become the Lead CSR who in addition to running our team manages a wide variety of Public Safety databases and other systems related offerings. Lee is a graduate of California State University at Fullerton and enjoys hiking and other outdoor activities. If you have a technical issue or question, Lee is available to help you.

ADVANCED AUTHENTICATION FOR ATSC MOBILE DATA ACCESS

ATSC has developed and implemented a no-cost Advanced Authentication solution for our Voyager product line. The solution meets all FBI CJIS Security policy requirements for Advanced Authentication and is currently being deployed to our state service bureau network. This product upgrade is provided at no cost to our users, as it is an inert token method. It is a designed as a self-service solution. Officers simply issue their own tokens from the Voyager OnLine website as long as they are authorized users. Control Terminal Authorities in several states tell us we have the only approved advanced authentication method they have seen for handheld devices.

NEW VOYAGER WEBSITE ROLLOUT!

ATSC Voyager is pleased to announce the rollout of our updated Voyager Website www.atsc.com/voyager. The revamped website provides a comprehensive view into how Voyager's secure wireless NCIC, NLETS and State CJIS access can help your agency improve officer safety and productivity. Learn more about our different product offerings, such as our Software as a Service (SaaS) for Handheld, Mobile Laptop and Desktop Query applications, our e-ticketing solutions, and our powerful stand alone Voyager Enterprise Message Broker that supports local, regional and interstate information sharing initiatives. On the new site, you will also be able to view press releases, the bi-monthly Voyager InQuery newsletter, as well as sign up for our informative Webinar series on Voyager Mobile Data solutions. Current Voyager customers can still login to their accounts with their secure user name and passwords to access our Voyager OnLine Reporting and Administrative Toolset.

Voyager solutions may qualify for **Byrne JAG Grants**, and the one-time stimulus allocation grant deadlines occur **May 18**. If you see any solutions that would be beneficial to your agency and you have questions around the Byrne grant process and funding, please call us as we can help you.

ATSC Voyager continues to strive for the best customer service experience possible. The creation of our new website is part of our ongoing commitment to provide the law enforcement community with the tools they need to succeed. ATSC Voyager is the nation's leading wireless NCIC provider with the largest Software as a Service network in the United States. Please take a look and let us know if you have any further questions.

VOYAGER

ATSC Voyager Wireless Enterprise Solutions

Secure, immediate access to vital information by multiple wireless data networks and a variety of device types is the next level of information sharing made possible by ATSC Voyager Wireless Enterprise Solutions.

ATSC Voyager enables Law Enforcement Agencies to have access to real time criminal justice information over a wide variety of device types. Access to an array of data sources - including NCIC, State CJIS, NleTS, DMV, Local RMS, and more - are available right at your fingertips. Instant results free up radio traffic, increasing Officer Safety and Productivity. And with the nation's largest software as a service offering ATSC Voyager is the cost-effective solution to Homeland Security and Information Sharing Initiative requirements. ATSC Voyager's "Service First" concept makes our technology and commitment to customer service a parallel track for implementation success.

ATSC Voyager Wireless Enterprise Product Suite:

- ATSC Voyager Mobile for Laptops/PDAs**
 - Fully integrated wireless query and messaging application providing law enforcement officers with full, mobile data access
 - messaging, presence management, AVL/GPD and silent dispatch included
 - highly configurable user interface
 - real-time criminal and motor vehicle database queries
- ATSC Voyager Query for Handheld Devices** - grants immediate, handheld access to criminal and motor vehicle records, images and forms. Ideal for CJIS data access and secure messaging, provides outstanding data access for officers unable to rely on radio dispatchers.
