

# Voyager Query™

## Enterprise Class Secure Handheld Data Solution

ATSC Public Safety's Voyager Query is the industry's leading **handheld wireless** data access application that provides mobile and undercover law enforcement officers with real time access to **criminal justice data** no matter where they are. Voyager Query is ideal for officers and agents that work undercover, motorcycle, bicycle, horseback, or foot patrol. The solution also serves as a low cost MDT replacement for departments that do not need an overly complicated system or expense burden. ATSC Public Safety's "**Service First**" concept makes our technology and commitment to customer service a parallel track for implementation success.

"We use Voyager Query on a Blackberry device for portability and conceal ability. Our Auto Theft detectives can enter a facility and query vehicle identification numbers, tags and individuals quickly and easily. Tactical officers can be inside a location and query without being detected. The connection is very reliable. The speed is impressive. Results are returned in a flash."  
Sgt. Sam Fadel  
Hialeah Police Department  
Florida

### Key Solution Features

- Supports multiple handheld device types
- NCIC/NLETS/State CJIS Queries
- HAZMAT
- Intra and Inter Agency Messaging
- Single inquiry for multiple database checks
- Person, Plate, VIN, Firearms, Property, Boat
- Image support for quick visual ID
- Two Factor Authentication

### **Handheld Data Access - Anywhere**

Voyager Query compliments Voyager Mobile and can be deployed with the **Voyager Enterprise Server™** for a dedicated infrastructure solution. Agencies may also utilize the largest shared server network in the United States, the **Voyager CJIS Network™**, connecting to state CJIS systems via CTA approved Voyager shared servers. Either method allows authorized users access to critical CJIS data on multiple device types over any wireless data network. The ability to message among multiple agencies provides a new level of information sharing. This unique criminal justice toolset enables agencies to cost effectively meet Homeland Security and **Information Sharing Initiative** requirements, enhancing funding eligibility.

### **High Speed - Low Cost**

Voyager is designed to run at the highest possible speed over all IP based Public or Private wireless networks, without the need for middleware. Agencies can run on dedicated or shared servers, based on IT management and budget requirements.

Built by ATSC Corporation

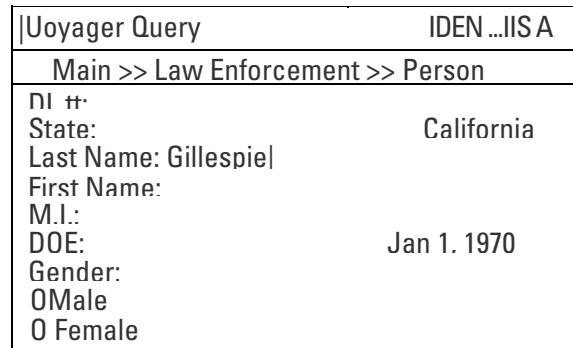

# Voyager Query

## Features, Functionality and Technical Specifications

Voyager Query is designed for ease of use and quick data access to ensure officer safety.

**1. Select an Inquiry Type**

**2. Input data and send encrypted query**

**3. View data return from multiple sources**

**4. See mug shots and images**

### Handheld OS Platform Support

- Blackberry, Windows Mobile/Pocket PC, Palm, Motorola Java

### Optional Modules

- Voice Activated query for hands free use
- Electronic Ticketing with Query capability (Windows Mobile)

### Wireless Network Support

- Commercial - GPRS/EDGE, 1xRTT/EVDO, CDMA, iDEN
- 802.11 WLAN and Mesh Networks, Frame Relay
- Private Radio - Ericsson EDACS, Motorola RDLAP
